

Your Veterinarian Uses

 **cuattro DR^{HD}**

FUN FACTS

X-rays are basically a form of light that we cannot see. They are on the electromagnetic spectrum with visible light. X-rays have shorter wavelengths.

Before it was learned that x-rays can be dangerous, they were used like a photobooth at the circus and carnivals. Even shoe stores used them to provide the "perfect fit".

Our x-ray machines need less dose so they are safer for your pet and the Veterinary staff.

QUIZ

What can stop x-rays and Superman from seeing through?
